

## Supplementary Appendix

This appendix has been provided by the authors to give readers additional information about their work.

**On-line Table 1. Demographic features of subjects with activated BAT and controls**

|                          | BAT<br>(n = 15)    | Controls<br>(n = 30) | P<br>Value <sup>a</sup> |
|--------------------------|--------------------|----------------------|-------------------------|
| Sex                      | 10 women,<br>5 men | 20 women,<br>10 men  | 1.000                   |
| Age (yr)                 | 35.67 ± 6.66       | 37.43 ± 6.14         | .904                    |
| BMI (kg/m <sup>2</sup> ) | 20.12 ± 1.47       | 20.29 ± 1.43         | .971                    |
| FPG (mmol/L)             | 4.62 ± 0.54        | 4.71 ± 0.36          | .089                    |
| Handedness (R:L:N/A)     | 14:0:1             | 29:0:1               | —                       |
| Outdoor temperature (°C) | 8.87 ± 4.56        | 8.00 ± 5.43          | .334                    |

**Note:**—R indicates right; L, left; N/A, not applicable; —, indicates statistical analysis was not applicable.

<sup>a</sup> P values are based on the Student *t* test.

**On-line Table 2. Demographic features of BAT-positive subjects**

|                          | T1 (n = 15)        | T2 (n = 15)        | P<br>Value <sup>a</sup> |
|--------------------------|--------------------|--------------------|-------------------------|
| Sex                      | 10 women,<br>5 men | 10 women,<br>5 men | 1.000                   |
| Age (yr)                 | 35.67 ± 6.66       | 35.67 ± 6.66       | 1.000                   |
| BMI (kg/m <sup>2</sup> ) | 20.12 ± 1.47       | 20.08 ± 1.56       | 0.638                   |
| FPG (mmol/L)             | 4.62 ± 0.54        | 4.81 ± 0.44        | 0.308                   |
| Handedness (R:L:N/A)     | 14:0:1             | 14:0:1             | —                       |
| Outdoor temperature (°C) | 8.87 ± 4.56        | 9.07 ± 6.67        | 0.875                   |

**Note:**—T1 indicates before heat exposure; T2, after heat exposure; R indicates right; L, left; N/A, not applicable; —, indicates statistical analysis was not applicable.

<sup>a</sup> P values are based on paired *t* tests.

**On-line Table 3. Brain regions with significant metabolic difference between BAT-positive and BAT-negative groups**

| Brain Region  | Side  | K <sub>E</sub> <sup>a</sup> | Coordinates <sup>b</sup> |     |     | Z <sub>max</sub> |
|---|-------|-----------------------------|--------------------------|-----|-----|------------------|
|   |       |                             | x                        | y   | z   |                  |
| <b>Hypoactivity of BAT-positive group compared with BAT-negative group<sup>c</sup></b>  |       |                             |                          |     |     |                  |
| Parietal lobe, inferior parietal lobule (BA 40)   | Left  | 33                          | -52                      | -36 | 26  | 3.50             |
| Limbic lobe, posterior cingulate (BA 23)  | Right | 42                          | 8                        | -36 | 26  | 3.49             |
| Frontal lobe, rectal gyrus (BA 11)  | Right | 41                          | 6                        | 34  | -28 | 3.30             |
| <b>Hyperactivity of BAT-positive group compared with BAT-negative group<sup>c</sup></b> |       |                             |                          |     |     |                  |
| Parietal lobe, precuneus (BA 7)   | Left  | 343                         | -4                       | -80 | 38  | 3.59             |

**Note:**—K<sub>E</sub> indicates extend threshold.

<sup>a</sup> Uncorrected *P* < .001 K<sub>E</sub> = 80.

<sup>b</sup> MNI standard space.

<sup>c</sup> Survived in age- and FDR-corrected *P* < .01.

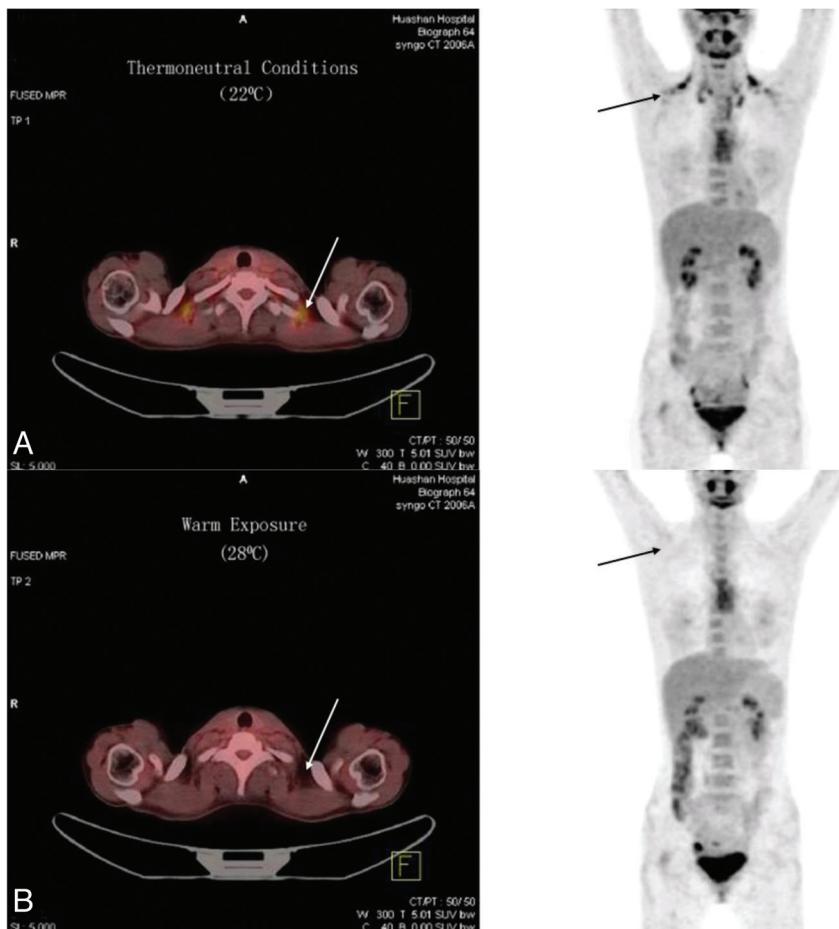

**On-line Table 4. Brain regions with significant metabolic changes following BAT elimination by heat exposure (28°C)**

| Exposure <sup>a</sup> /Brain Region             | Side  | K <sub>E</sub> <sup>b</sup> | Coordinates <sup>c</sup> |     |     | Z <sub>max</sub> |
|---|-------|-----------------------------|--------------------------|-----|-----|------------------|
|   |       |                             | x                        | y   | z   |                  |
| Parietal lobe, inferior parietal lobule (BA 40) | Left  | 576                         | -40                      | -60 | 64  | 4.58             |
| Parietal lobe, inferior parietal lobule (BA 40) | Left  |                             | -40                      | 36  | 38  | 3.75             |
| Parietal lobe, postcentral gyrus (BA 5)         | Left  |                             | -26                      | -50 | 68  | 3.87             |
| Frontal lobe, subgyral (BA 6)                   | Right | 61                          | 28                       | -4  | 58  | 4.14             |
| Frontal lobe, inferior frontal gyrus (BA 44)    | Left  |                             | -48                      | 0   | 22  | 3.44             |
| Frontal lobe, medial frontal gyrus (BA 6)       | Left  | 80                          | 0                        | -24 | 52  | 3.70             |
| Frontal lobe, middle frontal gyrus (BA 9)       | Left  | 53                          | -42                      | 28  | 30  | 3.57             |
| Anterior lobe, culmen                           | Right | 138                         | 30                       | -60 | -34 | 3.58             |
| Anterior lobe                                   | Right |                             | 30                       | -48 | -38 | 3.39             |
| Sublobar, insula (BA 13)                        | Left  | 80                          | -40                      | -6  | 18  | 4.00             |
| Sublobar, lentiform nucleus                     | Right | 65                          | 28                       | -2  | -8  | 3.95             |

**Online Fig 1.** BAT activity as assessed by PET-CT with  $^{18}\text{F}$ -FDG. The intense yellow regions in the transverse plane of the PET/CT image (A) show the areas of BAT (arrow). Comparative PET-CT scans reveal the patterns of  $^{18}\text{F}$ -FDG uptake in the same subject under thermoneutral conditions ( $22^\circ\text{C}$ ) and after exposure to heat ( $28^\circ\text{C}$ ). There is no detectable BAT activity after heat exposure (arrow, B).
