

ON-LINE FIGURE. Visualization of the Labbe group dural venous channel with typical flattened morphology and a distinct transition point (*black arrows*) on conventional angiography (A and B), stereoAnaglyph (<http://stereo.jpn.org/eng/stphmkr/index.html>) angiography (C and D), postcontrast volumetric T1 MR imaging (E), oblique thick MIP reconstruction (F), volume-rendered reconstruction of the Dyna CT (Siemens) venous phase (G), and corresponding stereoAnaglyph (H). Stereo images can be viewed with red-cyan anaglyph glasses.
