Supplementary Figure. Representative amyloid PET images (top: amyloid negative, bottom: amyloid positive) with their voxel-wise relative change (RC) maps, calculated using the standard-dose images as the reference. The enhanced images show a smaller RC range than the ultra-low-dose images.

Supplementary Table. Cerebral ROIs for derivation of the larger regions of interest. The larger regions were then used to calculate a composite “global” value of the association cortex.

Region	FreeSurfer region
